This lysozyme protects against diseases caused by plant pathogens particularly bacterial pathogens. The method is useful for producing bovine lysozyme in host plants e.g. grapevines. Plasmid encoding a recombinant plant virus which comprises a bovine lysozyme encoding nucleic acid, is useful for producing bovine lysozyme in a plant. It is also useful for producing bovine lysozyme for an anti-xylella reagent for development of a recombinant source of Bolys protein for treating grapevines against pierce's disease (PD). The method is useful for protecting grapevines against xylella fastidiosa bacterium infection that causes PD. The present sequence is bovine lysozyme DNA.
              Sequence encoding bovine lysosyme c2

                                                                                                                                                                                                                                                                                                                                                                     The invention relates to viral vectors and methods for producing transgenic plants that express heterologous DNA that encode a ruminant lysozyme, preferably bovine. This lysozyme protects against diseases caused by plant pathogens particularly bacterial pathogens. The method is useful for producing bovine lysozyme in host plants e.g. grapevines. Plasmid encoding a recombinant plant virus which comprises a bovine lysozyme encoding nucleic acid, is useful for producing bovine lysozyme pencoding nucleic acid, is useful for producing bovine lysozyme in a plant. It is also useful for producing bovine lysozyme recombinant source of BoLys protein for treating grapevines against sierce's disease (PD). The method is useful for protecting grapevines against xylella fastidiosa bacterium infection that causes PD. The present sequence is p1044-BoLys plasmid DNA containing bovine lysozyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chimeric - Bos sp.

                  This sequence encodes the bovine lysozyme c2 and can be used in the transgenic plant of the invention. The transgenic plant is resistant to plant pathogens and contains heterologous DNA encoding a ruminant or ruminant-like lysozyme, the plant expresses sufficient levels of the lysozyme to render it less susceptible to the pathogens than the wild-type plant. The plants are resistant to bacterial pathogens such as Pseudomonas syringae or Erwinia carotovora.

```

```
The 3'-noncoding sequence does not contain a polyadenylation signal or a poly (A)+ tail. The 5'-terminus does not contain the ATG triplet corresponding to the translation initiation codon fo the pre-lysozyme C2 mRNA. Thus the cDNA insert encodes 16 amino acids amino-terminal to the amino-terminus of the mature protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Prodn. of animal lysozyme - consists of P. pastoris for transcription

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence encodes bovine lysozyme c. This sequence was used in the production of transgenic plants that are resistant to pathogens. The lysozyme encoded by this sequence has a greater ability to lyse gram negative bacteria than hen egg white lysozyme and also has a greater stability. The lysozyme may be applied directly to treat or protect plants such as notations to there or to the contract analyse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Protection of plants against plant pathogens - by transforma with DNA encoding a ruminant or ruminantilike lysozyme, esp. bovine lysozyme C

                                                                                                                                                                                                                                                                                                                                                     A cDNA bank was constructed using total RNA isolated from the human lymphoma cell line U-937. The bank was tested by hybridising with two radio-labeled 17-mer oligonucleotides (equiv. to the AA sequences 26-31 and 63-68 of HLZ). Clones isolated were designated pHL 14-1; pHL21 and pHL 23 (contg. an approx. 500 bp insert) and pHL2 and pHL8 (contg. a 300 bp insert).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence contained in plasmid pHLZ100. Apart from the four N-terminal amino acids, it encodes the entire sequence of human pre-lysozyme C of placental origin in addition to a translational stop signal. The mature lysozyme C corresponding to the pre-lysozyme C encoded by AAN92054 has the same AA sequence as human milk lysozyme. AAN92054 differs from the nucleotide sequence of the cDNAs encoding human pre-lysozyme C isolated from human histlocytic lymphoma cell line U-937 (see FT tags a and b). However, these nucleic acid differences do not alter the amino acid

CC of bio-pharmaceuticals, development of bio-sensors and transplantation.

CC The protein is used to manipulate stem cells in culture to give rise to CC neuroepithelial cells that is used to augment or replace cells damaged CC by illness, accidental damage or genetic disorders, induces the CC proliferation of neural cells and regeneration of nerve and brain tissue CC and is useful for the treatment of central and peripheral nervous system CC diseases and neuropathies, such as Alzheimer's, Parkinson's disease, CC Huntington's disease, amyotrophic lateral sclerosis and involved in CC chemotactic or chemokinetic activity, regulation of haematopolesis and CC susseful for treating lymphoid cell disorders, platelet disorders such as thrombocytopenia and osteoporosis, osteoarthritis, bone degenerative CC disorders or periodontal disease and for regeneration of bone, cartilage, CC tendon and ligament and in tissue repair, healing of burns, incisions CC and ulcers. The invention is also useful for gut protection, treatment CC severe combined immunodeficiency (SCID), bacterial or fungal infections, CC autoimmune disorders eg. multiple sclerosis, rheumatoid arthritis, autories such as asthma or other respiratory problems and is involved in thrombolysis or thrombosis is useful in treating wounds resulting CC disorders (hereditary disorders such as haemophilia) or to enhance contradian cycles of rhythms, fertility of male or female subjects, contradian cycles of rhythms, fertility of male or female subjects.
               metabolism, catabolism, anabolism, processing utilisation, storage elimination of dietary fat, lipid, protein, carbohydrate, vitamins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Leukaemia and myelodysplastic syndromes. The protein exhibits activity relating to angiogenesis, cytokine, stem cell growth factor activity an activity inhibin related activities and is involved in proliferation, differentiation and survival of pluripotent and totipotent stem cells and useful tengineering damaged or diseased tissues, manufacture of him-physicals damaged or diseased tissues, manufacture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Page 150; 158pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           28-FEB-2000; 2000US-0515126

                                                                                                        Query Match
                                                                                                                                                     A cDNA bank was constructed using total RNA isolated from the human lymphoma cell line U-937. The bank was tested by hybridising with two radio-labeled 17-mer oligonucleotides (equiv. to the AA sequences 26-31 and 63-68 of HLZ). Clones isolated were designated pHL 14-1; pHL21 and pHL 23 (contg. an approx. 500 bp insert) and pHL2 and pHL8 (contg. a 300 bp insert).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAN70943;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAN70943 standard; DNA;

(I) have cytostatic activity and can be used in vaccine production. (I) can be used for stimulating and/or expanding T cells specific for a tumour protein on contact with the T cells. They are also useful for inhibiting the development of cancer in a patient. (I) can be used as probes or primers for nucleic acid hybridisation, for preparing mutant species primers, or primers for use in genetic constructions. (I) can be used in the diagnosis of a colon tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated colon tumor polynucleotide differentially expressed in colon tumor or colon metastatic tumor and polypeptides encoded by them, useful for inhibiting development of cancer in patient - \,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A CDNA bank was constructed using total RNA isolated from the human lymphoma cell line U-937. The bank was tested by hybridising with two radio-labeled 17-mer oligonucleotides (equiv. to the AA sequences 26-31 and 63-68 of HLZ). Clones isolated were designated pHL 14-1; pHL21 and pHL 23 (contg. an approx. 500 bp insert) and pHL2 and pHL8 (contg. a 300 bp insert).
                                                                                                                                                                                                                         WO200196388-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
This sequence represents a human nucleotide sequence which is differentially expressed in colon cancer cells compared to the expression levels in normal cells. The nucleotide sequence can be used as a source of primers and probes. The nucleotide sequence is useful for determining the phenotype of a cell by detecting the differential expression of the sequence relative to a normal cell. The probes derived from the sequence can also be used to determine the phenotype of cells in a sample. Probes and antibodies which hybridise to the nucleotide sequence can also be used to determine the phenotype of a cell. The primers are useful for detecting a mutation in a test nucleotide sequence and also for detecting cancer, preferably colon cancer. Antibodies against the protein encoded by the nucleotide sequence can also be used in a method to detect colon cancer. The diagnostic method is non-invasive and accurate for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABL36412 to ABL38645 represent human colon tumour antigen cDNA clones (I) which were isolated from human colon tumour and colon metastatic tumour cDNA libraries. (I) have cytostatic activity and can be used in vaccine production. (I) can be used for stimulating and/or expanding T cells specific for a tumour protein on contact with the T cells. They are also useful for inhibiting the development of cancer in a patient. (I) can be used as probes or primers for nucleic acid hybridisation, for preparing mutant species primers, or primers for use in genetic constructions. (I)

                                                                                                                                                                                                                                                                CC expressed in cancer tissues. ABB/893 to ABB/9004 represent proteins and central proteins are encoded by the AB060776 to AB060787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide cc encoded by (I) is useful for detecting cancer in a patient sample, and cc for detecting the presence or absence of a polynucleotide encoded by a cucleic acid which hybridises to (I) in a cell. A probe/primer derived cc from (I) can be used for determining the presence of a nucleic acid which hybridises to (I) in serious the phenotype of cells in a sample cc of cells from a patient. (I) is useful for determining the presence of sample cc of cells from a patient. (I) is useful for determining the presence of cc olon cancer in a cell or tissue type, for determining the presence or cc state of other type of cancer, in antisense therapy, to generate cc macroarrays on a solid surface, to identify a chromosome on which the ccorresponding gene resides, and in tissue profiling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise cc antibodies, and to screen for peptide analogues and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 6.8%; Score 30; DB 21; Best Local Similarity 100.0%; Pred. RESULT 1 US-07-798-223A-1

Sequence 1, Application US/07798223A Patent No. 5422108 GENERAL INFORMATION:

APPLICANT: Mirkov, T. Erik
APPLICANT: Fitzmaurice, Leona Claire
TITLE OF INVENTION: Protection of Plants Against Pathogens
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:

ADDRESSEE:

E: Fitch, Even, Tabin & Flannery
135 South LaSalle Street, Suite 900

Sequence 1085, Application US/09878178
Patent No. US20020177552A1
GENERAL INFORMATION:
APPLICANT: Jiang, Yuqiu
APPLICANT: Harlocker, Susan L.
APPLICANT: Secrist, Heather
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY
TITLE OF INVENTION: AND DIAGNOSIS OF COLON CANCER
FILE REFERENCE: 210121.527
CURRENT APPLICATION NUMBER: US/09/878,178
CURRENT FILING DATE: 2001-06-08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1085, Application US/10046935 Patent No. US20020156011A1
